DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Bauchot.

Regarding claim 1, a radio transmitting device comprising radio transmitter circuitry and processing means for processing digital signals to produce a modulating signal for the radio transmitter circuitry is disclosed in Bauchot, figure 1A (showing radio transmitters). The processing means is configured to implement a protocol stack having a physical layer and a medium access control layer, above the physical layer is disclosed in column 11, lines 3-6. Providing a plurality of transport channels which are combined and then interleaved to produce said modulating signal is disclosed in column 6, lines 10-33 (disclosing various channels which are combined into the different types of slots and then and interleaved).

Regarding claim 2, a radio transmitting device according to claim 1, wherein the device is adapted for TDMA communication and said interleaving is performed on blocks of data constituting a plurality of TDMA bursts is disclosed in column 2, lines 16-20.

Claim Rejections - 35 USC § 103

Art Unit: 2616

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bauchot in view of Wiedeman. Regarding claim 3, a radio transmitting device according to claim 1, wherein the processing means performs interleaving of said transport channels before they are combined is missing from Bauchot. However, Wiedeman discloses in column 9, lines 32-42 and 54-64 a system that interleaves a data stream before combining it with other data for transmission. It would have been obvious to one skilled in the art at the time of the invention to use the interleave-then-combine method of Wiedeman in the system of Bauchot. The motivation would be to separate the channels from each other.
